## PROJECT DESCRIPTION

The work under this contract shall include all equipment, labor, material, supplies, etc. necessary to furnish the work described in this contract.

The Town of Burlington, through the Parks and Recreation Department is seeking bids for the construction of an off leash dog park at Rahanis Park on Mill Street in Burlington, MA. The proposed project consists of the construction of a new dog park within Rahanis Park, between the existing softball field and soccer fields. Access is provided from the existing parking area located off Mill Street, as well as by the pedestrian bridge across Sawmill Brook. The project will include the installation of new fencing, gravel access path, pea stone, decomposed granite, artificial turf, shade trees, park amenities including water fountains, waste barrels, benches, irrigation system and utilities including water supply and power supply.

The entire dog park construction will occur within the existing developed portion of Rahanis Park, which is bounded by an existing chain link fence. The dog park will consist of pea stone, decomposed granite (stone dust) and artificial “K-9” turf surfaces, enclosed by black vinyl coated chain link fence. The park will be divided into an “active dog space” (16,000 SF±) and a “passive dog space” (1,800 SF±), which will have separate gated entrances. The surface material of the “passive dog space” will be primarily pea stone and a pathway of decomposed granite and the “active dog space” will be a combination of pea stone and artificial turf with a pathway of decomposed granite. The project will also include a compacted gravel access path to the park, installation of water service lines and typical dog park amenities (benches and dog water fountains).

A water service for the dog park will be extended from the existing water main in Rahanis Park, which currently terminates at a hydrant near the volleyball court. The new water service will provide water to an irrigation system and stand-alone hose spigots. The spigots and irrigation are necessary for maintaining the dog park surface to minimize the potential for pet waste related nuisances and to provide water for the shade trees and mitigation plantings during the initial few seasons of growth. The existing parking lot, play areas, soccer fields and northeastern softball field will be preserved, while the southwestern softball field will be abandoned. As there is no new impervious area proposed and the existing drainage patterns will be maintained, a storm water management system is not necessary. The entire dog park will be underlain by a six inch layer of crushed stone, which has significant void space for the temporary storage and infiltration of storm water.

There will be no direct disturbance of the Bordering Vegetated Wetlands or inland bank that surround the project site. The local Burlington Wetland Bylaw Regulation establishes a 20-ft “No-Disturb Zone” zone to all Bordering Vegetated Wetlands within the Town. This project will impact small portions of land within the “No-Disturb Zone; however, all of the work will occur on land that has been previously altered. This portion of the no-disturb zone is encumbered by an existing sewer main. The sewer main cannot be moved or relocated and the ground cover in the vicinity must be left open for maintenance purposes. Planting of trees and

*Burlington Dog Park  
Bid Opening: 10/6/17 at 10:00 AM*

shrubs in this location will encumber the easement so mitigation is limited to plants that can be mowed once annually to minimize the growth of woody vegetation. To restore the 20' no-disturb zone to the extent practicable, New England Conservation/Wildlife seed mix will be applied between the new gravel path and existing chain link fence/limit of work. This seed mix will improve wildlife habitat values and native plant proliferation in a manner that will not encumber the existing sewer easement.

Site notes:

1. Loam and subsoil removed from the work area shall be stockpiled off-site within the Town of Burlington, as directed by the Burlington Parks & Recreation Department.
2. Gravel/stone dust colors and artificial turf material shall be chosen by the town of Burlington recreation department prior to the start of construction. The contractor shall provide samples to the town of Burlington recreation department for selection.
3. Contractor shall coordinate the location of additional construction fencing or material stockpile locations with the Burlington recreation department.
4. All surface areas shall be stabilized with loam and seed unless specified otherwise.
5. Any stones excavated from the work area will be positioned within the premises of the park. Locations to be coordinated with the Parks & Recreation Department.
6. Finished surfaces shall be smooth, well graded & suitable for pedestrian use with no visible roots, brush, debris, rocks or boulders, sharp drops or holes and the like.

General utility notes:

1. The contractor is specifically cautioned that the location and/or elevation of existing utilities and structures as shown on these plans is based on records of various utility companies and where possible, measurements taken in the field. This information is not to be relied upon as being exact or complete. The location of all underground utilities and structures shall be verified in the field by the contractor prior to the start of construction. The contractor must contact the appropriate utility company, any governing permitting authority, and "digsafe" at least 72 hours prior to any excavation work to request exact field location of utilities and the engineer shall be notified in writing of any utilities interfering with the proposed construction and appropriate remedial action shall be taken before proceeding with the work. It shall be the responsibility of the contractor to relocate all existing utilities which conflict with the proposed improvements shown on the plan.

Construction sequence notes:

To prevent excessive erosion and silting, the following construction sequence coupled with other widely accepted principals for reducing erosion and sedimentation shall be implemented in the development of the site.

1. The contractor shall coordinate a pre-construction meeting at least 48 hours prior to any construction activity with the owner (owner's representative), conservation commission representative and any other interested town department representatives.
2. Stabilization practices for erosion and sediment control shall be installed prior to commencing construction activities. Place siltation fence at locations indicated on the the site development plans.
3. In preparing to remove materials from the work area on the site, careful consideration should be made to the extent of disturbance so as not to disturb more of the site than what is intended to be immediately developed and re-stabilized.
4. Loam/soil excavated from the work area shall be stock piled on the premises at a location to be specified by the town of Burlington recreation department. The soil stockpile shall be stabilized with silt fencing and seeded with a temporary erosion control seed mix to prevent wind erosion. Stockpiled materials on the site shall be located so as to minimize the potential for erosion into existing drainage infrastructure. Stockpiles shall be stabilized with hay bales, mulch socks or equivalent.
5. All debris or material removed from the work area shall be disposed of in accordance with federal, state, and local regulations.
6. Install irrigation, water and sewer utilities in the locations noted on the plans. Coordinate supply line and water tap for the drinking fountains with the town of Burlington department of public works.
7. Grade site to subgrade elevation using maximum 12" lifts. Apply temporary stabilization measures where warranted.
8. Place crushed stone subbase per typical surface treatment details and compact to 95%.
9. Place final stone dust and pea stone course and artificial turf in dog park area and dense graded gravel course for access path.
10. Complete fine grading of landscape islands and areas around the perimeter of the work area disturbed during construction. Loam and seed in miscellaneous areas as needed.
11. Install fences and gates.

12. Repair any deficiencies if identified during the as-built survey. This may include reclaiming portions of the existing parking area if damaged during construction.
13. Sweep parking lot (and mill street if required) with street sweeper. Repair any site appurtenances that may have been damaged during construction.
14. The contractor shall coordinate an as-built survey of the property to verify compliance with the construction plans. The as-built survey will include an on-the-ground topographic survey by a 2-man surveying team overseen by a registered professional land surveyor and a visual inspection by the project professional civil engineer. At least 1 week notice shall be provided for the as-built survey.
15. Remove temporary erosion control devices once all surfaces have been stabilized with adequate growth. Adequate growth is defined as vegetation covering 75% or more of the ground surface. Coordinate a final walk through with the project professional civil engineer and conservation commission agent in accordance with the order of conditions for the project. A second as-built survey may be necessary to re-certify any deficiencies identified during the initial as-built survey. At least 1 week notice shall be provided to schedule the as-built survey, if needed. The site contractor shall be responsible for the cost of any follow up survey's necessary due to work deficiencies.
16. Address final walk-through punch list items.

During construction, best management practices will be implemented to prevent erosion and sediment tracking from the site. Best management practices will include silt fencing (with silt sock in certain locations), construction fencing and stabilized construction tracking pad.
